

1. Description

The ES1451 is a dual channel speed and direction Hall sensor with two Hall sensing elements. It outputs two digital signals for speed and direction processing.

The ES1451 internally includes two Hall sensing elements located 1.40mm apart, an on-chip Hall voltage generator, voltage regulator for operation with supply voltage 2.7 to 24V, temperature compensation circuitry, small-signal amplifier, Hall sensor with dynamic offset cancellation system, Schmitt trigger and open-drain output. Signal processing of speed and signals is easy.

The ES1451 provides a variety of packages to customers: flat TO-94 for through-hole mount and SOT-23-6L for surface mount. All packages are RoHS compliant.

7. Absolute Maximum Ratings

Parameter	Value	Units
Supply Voltage (V _{CC})	-15 ~ +30	V
Junction Temperature	165	°C
Operating Temperature Range	-40 ~ 150	°C
Storage Temperature Range	-55 ~ 150	°C

Note: Absolute maximum ratings are limiting values to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability is not necessarily implied. Exposure to absolute maximum rating conditions for an extended period of time may affect device reliability.
